Circle Theorems for Arcs and Chords: 1. If two chords are congruent, then their corresponding arcs are congruent. 2. If the diameter or radius is perpendicular to a chord, then it bisects the chord and its arc. 3. In the same circle or congruent circles, two chords are congruent if and only if they are equidistant from the center.

Circle Theorem: Arcs and Chords (examples, worksheets ...)

Figure 1 A circle with four radii and two chords drawn.. Theorem 78: In a circle, if two chords are equal in measure, then their corresponding minor arcs are equal in measure. The converse of this theorem is also true. Theorem 79: In a circle, if two minor arcs are equal in measure, then their corresponding chords are equal in measure. Example 1: Use Figure 2 to determine the following.

Solution : $m \text{ arc } XY = m \text{ arc } ZW = 65^\circ$, but arc XY and arc ZW are not arcs of the same circle or of congruent circles.. So, arc XY and arc ZW are not congruent. Using Properties of Chords Example : A masonry hammer has a hammer on one end and a curved pick on the other end.
