Noninvasive positive pressure ventilation (NPPV) refers to the delivery of mechanical respiratory support without the use of endotracheal intubation (ETI). The present review focused on the effectiveness of NPPV in children > 1 month of age with acute respiratory failure (ARF) due to different conditions. ARF is the most common cause of cardiac arrest in children.

its third edition intensive care a concise textbook continues to provide an excellent introductory text to the practice of critical care medicine extensively revised expanded and updated the format of the new edition has been radically altered to make the text more readable and the information even more accessible comprehensive yet concise

"The book is intended primarily for trainees in intensive care medicine and has been designed particularly to meet the requirements of those preparing for examinations in this specialty. It is aimed not only at those embarking on specialist training in intensive care but also at trainees in other acute specialities who are increasingly becoming involved in the management of critically ill patients, and who may be sitting other postgraduate exams that include intensive care and acute medicine in the syllabus. The book will also serve as a valuable reference text for both trainees and qualified specialists."--BOOK JACKET.

This book is an accessible and highly illustrated introduction to intensive care medicine, suitable for junior doctors, medical students and nurses. Offers an accessible and highly illustrated introduction to intensive care medicine - ideal for any medical personnel working in the intimidating environment of the ICU for the first time Concise, double page spread design permits rapid review of essential information Concise but comprehensive coverage of all the main intensive care topics ranging from patient evaluation and ICU procedures through to organ system problems, infection, burns and poisoning Text is enlivened by clinical case-based questions and answers and pull out 'practice point boxes' and 'fine print' points for more advanced readers Wide range of colour clinical photographs, radiological images, ECGs and artwork schematics International author team ensures suitability for all markets

This extensively updated textbook is a comprehensive study guide that covers pediatric critical care principles and specific disease entities commonly encountered by the pediatric critical care medicine (PCCM) practitioner. Pathophysiologic aspects unique to the pediatric patient are emphasized. The first edition has become a highly utilized text for pediatric critical care fellows. The second edition will prove even more valuable to the fellow in-training and indeed to any clinical pediatric intensivist. In addition to updating the chapters from the previous edition, there are new chapters on topics such as central nervous structure and function, palliative care, child abuse and practical biostatistics. Pediatric Critical Care: Text and Study Guide is an invaluable clinically focused resource for PCCM practitioners. Allowing for concise reading on specific topics, this book acts as both text and study guide covering advanced physiology, pathophysiology, diagnostic considerations and treatment approaches that should be mastered by the higher level PCCM practitioner. The large number of illustrations complements the text in each chapter that also includes key references and case-orientated questions that help reinforce important ideas learned in the chapter.

This is the first comprehensive study guide covering all aspects of pediatric critical care medicine. It fills a void that exists in learning resources currently available to pediatric critical care practitioners. The major textbooks are excellent references, but do not allow concise reading on specific topics and are not intended to act as both text and study guide. There are also several handbooks available, but these are usually written for general pediatric residents and lack the advanced physiology and pathophysiology required for the higher level pediatric critical care practitioner

A completely new editorial team presents a radical revision to this leading critical care text, previously edited by Shoemaker et al. The New Edition delivers today's best coverage of both adult and pediatric critical care, with contributions from an roster of world experts. In addition to numerous new chapters and many extensively rewritten ones, it features a completely new section on commonly encountered problems and a new, more user-friendly organization. Presents only the most essential references within the text, with the rest provided on the enclosed CD-ROM.

The title is targeted at undergraduates and is designed to help students develop an understanding of the modern approach to child- care, identification, prevention and nursing management of common health problems of neonates and children. Summary for quick review has been incorporated Questions formulated for every chapter for self-evaluation of the related topic Presence of tables in the book. E.g. (Table: General trends in height and weight gain during childhood)

This is the first comprehensive study guide covering all aspects of pediatric critical care medicine. It fills a void that exists in learning resources currently available to pediatric critical care practitioners. The major textbooks are excellent references, but do not allow concise reading on specific topics and are not intended to act as both text and study guide. There are also several handbooks available, but these are usually written for general pediatric residents and lack the advanced physiology and pathophysiology required for the higher level pediatric critical care practitioner

Critical care medicine is one of the fastest-growing areas of practice, and Critical Care Study Guide, 1st ed., was the first reference to combine both concise text and reviews with questions. The second edition expands and improves coverage, including comprehensive studies in airway management, cardioversion and defibrillation, medical ethics, and the use of blood products. The unique combination of text with questions and answers makes this a crucial reference for all practitioners and residents who see patients in the Intensive Care Unit, and those planning to sit for medical boards.

Revision Notes in Intensive Care Medicine is a key resource for candidates preparing for postgraduate intensive care examinations. Mapped to the FFICM, EDIC and FCICM syllabuses, this title ensures candidates have all the information needed to prepare for their examinations. Information is presented in concise note form and bullet points with visually memorable tools, such as tables and diagrams, making revising and retaining key facts easier. Chapters are arranged into physiological systems, such as 'Respiratory Intensive Care' and 'Obstetric Intensive Care', and are subdivided into major clinical issues within each chapter so specific areas of further study can be found easily. Drawing from the authors' experiences as successful candidates, and carefully reviewed by consultants, Revision Notes in Intensive Care Medicine provides the foundation for postgraduate intensive care exam revision.

This concise, clear, pocket-sized text explains how to use drugs safely and efficiently in the management of the critically ill patient. It is also an invaluable quick reference for the doctor and nurse working in the intensive care unit. In addition to concise notes on important topics such as routes of drug administration, drug metabolism, drug interactions, monitoring, pharmacology in the critically ill and advanced life support, amongst others, the book includes an A-Z listing of the most widely used drugs and for each, outlines their key features, uses, administration, adverse effects and interactions/cautions in a standardised format for ease of quick reference.
