What is assessment and how is it a cultural practice? How does failure to account for linguistic and cultural variation among students jeopardize assessment validity? What is required to achieve cultural validity in assessment? This resource for practicing and prospective teachers – as well as others concerned with fair and valid assessment – provides a thorough grounding in relevant theory, research, and practice. The book lays out criteria for culturally valid assessment and recommends specific strategies that teachers can use to design and implement culturally valid classroom assessments. Assessment plays a powerful role in the process of education in the US and has a disproportionately negative impact on students who do not come from mainstream, middle-class backgrounds. Given the significance of testing in education today, cultural validity in assessment is an urgent issue facing educators. This book is essential reading for addressing this important, relevant topic.

This is the eBook of the printed book and may not include any media, website access codes, or print supplements that may come packaged with the bound book. Conceptual Physical Science, Fifth Edition, takes learning physical science to a new level by combining Hewitt's leading conceptual approach with a friendly writing style, strong integration of the sciences, more quantitative coverage, and a wealth of media resources to help professors in class, and students out of class. It provides a conceptual overview of basic, essential topics in physics, chemistry, earth science, and astronomy with optional quantitative coverage.

This unique and ground-breaking book is the result of 15 years research and synthesises over 800 meta-analyses on the influences on achievement in school-aged students. It builds a story about the power of teachers, feedback, and a model of learning and understanding. The research involves many millions of students and represents the largest ever evidence based research into what actually works in schools to improve learning. Areas covered include the influence of the student, home, school, curricula, teacher, and teaching strategies. A model of teaching and learning is developed based on the notion of visible teaching and visible learning. A major message is that what works best for students is similar to what works best for teachers – an attention to setting challenging learning intentions, being clear about what success means, and an attention to learning strategies for developing conceptual understanding about what teachers and students know and understand. Although the current evidence based fad has turned into a debate about test scores, this book is about using evidence to build and defend a model of teaching and learning. A major contribution is a fascinating benchmark/dashboard for comparing many innovations in teaching and schools.

A resource for middle and high school teachers offers activities, lesson plans, experiments, demonstrations, and games for teaching physics, chemistry, biology, and the earth and space sciences.

The health, development, and learning of many young children living in disadvantage areas are at serious risk. Access to education has improved under the United Nations Millennium Development Goals, and there are now programs in low- and middle-income countries that are aimed at improving instruction and learning. The research and evaluation on the effectiveness of such programs show there are significant challenges, but also some successes. This issue features presentations of leading international scientists, representatives from key governmental and non-governmental organizations, and others working with programs in the developing world and disadvantaged populations. The presentations describe the goals, existing challenges, and potential approaches to providing evidence-based programs to young children in rural, remote, and poverty stricken areas. Topics covered include: the state of early childhood in low and middle income nations, programs that have shown some success, and innovative research approaches that have been often considered unfeasible in these contexts. This is the 158th volume in this Jossey-Bass series New Directions for Child and Adolescent Development. Its mission is to provide scientific and scholarly presentations on cutting edge issues and concepts in this subject area. Each volume focuses on a specific new direction or research topic and is edited by experts from that field.

February issue includes Appendix entitled Directory of United States Government periodicals and subscription publications; September issue includes List of depository libraries; June and December issues include semiannual index
