The science of love states that attraction is another crucial component of love and is different from, yet related to lust. Dr. Fisher believes, “Your biology plays a role,” when it comes to attraction. Although we may get attracted to someone we lust for and vice versa, both lust and attraction can occur independently.

The Science Of Love: Lust, Attraction, Attachment & Brain ...

Being in love is affected by huge, measurable changes in the biochemistry of the brain. Science has identified three basic parts of love, each driven by a unique blend of brain chemicals. Lust is governed by both estrogen and testosterone, in both men and women. Attraction is driven by adrenaline, dopamine, and serotonin—the same chemicals that are released by exciting, novel experiences.
